jQuery hide() and show()

With jQuery, you can hide and show HTML elements with the `hide()` and `show()` methods:

Example

```
$("#hide").click(function(){  
    $("p").hide();  
});
```

});

Syntax:

```
$(selector).hide(speed,callback);
```

```
$(selector).show(speed,callback);
```

The optional speed parameter specifies the speed of the hiding/showing, and can take the following values: "slow", "fast", or milliseconds.

The optional callback parameter is a function to be executed after the `hide()` or `show()` method completes (you will learn more about callback functions in a later chapter).

The following example demonstrates the speed parameter with `hide()` :

Example

```
$("#button").click(function(){  
    $("#p").hide(1000);  
});
```

jQuery toggle()

You can also toggle between hiding and showing an element with the `toggle()` method.

Shown elements are hidden and hidden elements are shown:

Example

```
$("#button").click(function(){  
    $("#p").toggle();  
});
```

Syntax:

```
$(selector).toggle(speed,callback);
```

The optional speed parameter can take the following values: "slow", "fast", or milliseconds.

The optional callback parameter is a function to be executed after `toggle()` completes.
